

Five Minutes to a Working Journal

Your book came with free software: the PIP:Insight Trade Journal (pip-insight.co.uk/journal). Not a spreadsheet — a journal that scores your discipline and prices your setups. Your data never leaves your device. Here's the routine that makes it change your trading. *(Screenshots show a demo trade book.)*

- 1

Log the trade the moment it closes

Pair, direction, planned or unplanned, R result, and how you felt. Thirty seconds. The habit is the product.
- 2

Tag the setup by name

"Break & retest", "S/R bounce" — the journal prices each setup separately, and that's where the truth lives.

- 3

Watch the Discipline Score, not the P&L

A 0-100 dial weighing planned-trade share, emotional control, your reaction after losses, overtrading and risk consistency. Green weeks on the dial come before green months on the account.

The Discipline Score. Nobody else measures how you behave in the trades right after a loss. This does.

- 4

Read your Playbook monthly

THE EDGE is your best setup by expectancy — do more of it. THE LEAK is your worst — cut it or fix it. Most traders never learn which is which.

SETUP	TRADES	WIN RATE	NET R	PER TRADE	
London open	6	67%	+7.3R	+1.22R	THE EDGE
Break & retest	3	67%	+3.4R	+1.13R	
Trend pullback	7	43%	+3.0R	+0.43R	
Range fade	8	38%	+2.9R	+0.36R	
S/R bounce	7	43%	+2.7R	+0.39R	

Your playbook, priced. Every setup's trades, win rate, net R and expectancy.

- 5

Check the calendar after a red day

One red square is a lesson bought. Three in a row is a pattern — and the heatmap will show you what it is.

Why it's free: most traders don't lose to the market — they lose to themselves, unrecorded. A journal makes the losing visible, and visible things get fixed. The optional Pro layer (£9.99/mo) adds an AI analyst that reads your journal; the journal itself is free forever.
